Thro' office of Comdg Officer

Sir

In reply to your communication of the 9th ult. in reference to the water supply etc. I have the honor to report that the principal supply is derived from a small rivulet flowing within a few feet from the Company street.

The volume of this Brook is quite small but the water coming direct from the mountain springs and melted snow is pure and cold and in sufficient quantity for needs of the Post. see E.B. 1.21.1878

Springs are found along the Banks of this stream two large and

25 permanent ones being within the limits of the Camp and in several places within short distances of the mens quarters wells can be dug and water obtained within a few feet of the surface, water is supplied the garrison by means of water Barrells hauled in a six mule wagon in the absence of a water wagon and then distributed.

I believe it practicable to conduct water here from a point up the Canon a mile distant by means of sluices and that such a supply would be permanent and the quantity ample for a large post, such a work could be conducted by labor of troops, but would occasion a large expenditure for lumber.

I consider it impracticable to conduct

USFH-00000687
