ISSUED DETERMINATIONS OF ASSURED OR ADEQUATE WATER SUPPLY SINCE 1973

NOTE: The following is a list of all 'Issued' determinations of assured or adequate water supply as reflected in the Department's electronic records as of October 1, 2009. Please be aware that much of this database information is legacy information that does not reflect the complete record of the decision. Some of the information dates back to 1973, which predates the Department's creation, and the information electronically recorded was collected under various statutory and regulatory rule frameworks over the last 35 years, thus it is not always reflective of the information needed under the current application process. While the Department continues to update the database as errors and omissions are detected, the entire data set has not been fully scrutinized for accuracy and may contain errors or omissions. This list is intended for general information purposes only and will not necessarily yield an accurate list of committed demands for purposes of determining the physical availability of groundwater in any given area. This list is intended to be used as a starting point for an estimate of the demands associated with issued determinations in a given area. Persons using this information are strongly advised to contact the Office of Assured and Adequate Water Supply for assistance in accurately determining existing and projected water demands in a given area.

Note: Under the Adequacy Program, this list includes both 'Adequate' and 'Inadequate' determinations. Under the Assured Program, this list does not include any change of ownership applications or assignment applications; it is limited to the first time a determination was issued for a particular subdivision. For designations of both Assured and Adequate Water Supply, this list includes the original designation, as well as any subsequent designation modifications for that particular water provider. For Water Reports or Certificates of Assured Water Supply, the subdivision is listed even if the subdivision based its proof of physical availability on an Analysis of Adequacy or Analysis of Assured Water Supply. Note that the "Reference File" field, as well as the Physical availability source as an Analysis or PAD (yes/no) fields may not be accurate. This list also does not capture individual uses or rights in a given area, nor does it capture uses by lots created outside of the assured or adequate water supply review process.

Please contact the Office of Assured and Adequate Water Supply Program Coordinator at (602) 771-8599 for additional information.
