Western Navajo School, Tuba, Arizona,

April 6, 1907.

Mr. D.M. Wynkoop,

Head Farmer,

Tuba, Arizona,

Dear Sir:-

Inclosed you will find a blank which the Department requires to be filled out each year from the farm records.

Heretofore this report has been made out from the records of this office rather than from the farm records.

This year you will be expected to keep the farm records so you can make out this report at the close of the year.

It will be necessary to have exact measurements of land planted to each crop and to keep exact records of yield.

I, also, wish a record to be kept when each plat of ground was planted; after that keep a record of the times when each plat was irrigated and cultivated and about the amount of water required for each irrigation. This is necessary to enable us to cut out the unprofitable crops. Plant no more of any crop than the demands of the school and employees require. An exception may have to be made in favor of potatoes this year, as I wish to plant all the seed purchas[illegible] last year the crops that gave the best results were:-

[illegible]rots-Beets-pumpkins- corn and turnips:potatoes.

The keeping qualities of crops must be taken into consideration. [illegible] Department has been criticised by inspecting officials for

Care of proper attention to tools and farm machinery and the neat appearance of the barn and premises.

It is understood that the furrow or rill method is to be used in irrigating where practicable, and where ponding has to be resorted to a minimum amount of water must be used. To have no more land to such a depth that water will enter on any portion of it is not up to date irrigation.

All the weeds there except those immediately around the school grounds are placed in your care and should receive proper attention.

Very respectfully,

Superintendent.
