Sir/

I have the honor of reporting that in compliance with your verbal instructions, I have thoroughly inspected the pine timbers in these Mountains (the Huachucas) with a view of extending the reservation to include such as may be suitable for supplying the necessities of the Government.

I found suitable timber in only one place and that is occupied by what is known as the Gird Mill, which supplies lumber for mining purposes in the Tombstone Mining District. I noted the following facts with reference to this timber, viz:

1st The amount is sufficient to supply all demands for at least two years, as I believe.

2nd The quality is excellent.

3rd From the position occupied by Gird's Mill the timber can be easily obtained.

4th The supply of water is not sufficient to run the Mill unless Gird proceeds in bringing it from a Spring about two miles

I have the honor of reporting that in compliance with your verbal instructions, I have thoroughly inspected the pine timber in the Mountains (the Huachucas) with a view of extending the reservation to include such as may be suitable for supplying the necessities of the Government.

I found suitable timber in only one place and that is occupied by what is known as the Girdo Mill, which supplies timber for mining purposes in the Tombstone Mining District. I noted the following facts with reference to the timber, viz:

1st The amount sufficient to supply all demands for at least two years, as I believe.

2nd The quality is excellent.

3rd From the position occupied by Girdo's Mill the timber can be easily obtained.

4th The supply of water is not sufficient to run the Mill unless Girdo proceeds in bringing it from a Spring about five miles distant. He is building flumes for this purpose.

5th The Mill is on the top of the mountain at an elevation of 6100 feet, and engineers found it impracticable to bring logs from

to the foot of the Mountains owing to the very steep hills to be climbed by teams, and further that the flags were worn so much by dragging over rocks; For these reasons the Mill was placed on the top of the Mountains. The Machinery was taken up the roads by means of Pulleys fastened to trees. It took about one week to pass, in this way, over a distance of about two and one half miles.

5th The lumber is now brought from the Mill to the brink of the hill on wagons then it is put through sleds constructed of fine logs. It is then taken down the valley. In some places these sleds are turned down the hill, the runners taken out & the sled goes down by the force of gravity.

Once at the foot of the hill, the sled is left & another constructed for the next load., as animals could not pull a sled up the hill.

7th Forage is carried up the hill on burros.

8th The Mill now run by Gird is capable of cutting 10,000 feet

Mills were worn so much by dragging over rocks, for these reasons, the Mill was placed on the top of the Mountains. The Machinery was taken up the roads by means of Pulleys fastened to trees. It took about one week to pass, in this way, over a distance of about two and one half miles.

4th The lumber is now brought from the Mill to the brink of the hill on wagons then it is put through sleds constructed of pine logs. It is thus taken down to the valley. In some places these sleds are turned down the hill, the mules taken out & the sled goes down by the force of gravity.

When at the foot of the hill, the sled is left & another constructed for the next load, as animals could not pull a sled up the hill.

5th Storage is carried up the hill on burros.

6th The Mill now run by Gird is capable of cutting 10,000 feet of Lumber in twelve hours.

7th This Gird has constructed out buildings. Sheds &c for all needful purposes.

10th The road now tracked by Gird is as good as can be made
