INTRODUCTION

The Hydrographic Survey Report (HSR) for the San Pedro River watershed is part of the process to conduct a general adjudication of the Gila River System and Source. This is the first watershed HSR to be published for the Gila River adjudication.

Due to the relatively large number of water uses occurring within the San Pedro River watershed, this report has been divided into nine separate volumes. They are entitled:

1. General Assessment
2. Comprehensive Indices
3. Sierra Vista Subwatershed Watershed File Reports
4. Benson Subwatershed Watershed File Reports
5. Redington Subwatershed Watershed File Reports
6. Winkelman and Aravaipa Subwatersheds Watershed File Reports
7. Zone 2 Well Reports (formerly Wells Subject to Federal Claims)
8. Catalogued Wells
9. Maps of Water Uses

Volume 1, the General Assessment, describes the nature of the adjudication proceeding, the hydrologic evaluation of the water supply, water uses (natural and cultural) and their relationship, the determination of wells which are located in Zones 1, 2, or 3 as directed by the Court, investigation criteria employed by the Arizona Department of Water Resources (DWR), the results of the investigations for major water users and non-Indian federal reserved rights claims, and the quantification procedures utilized by DWR to estimate the amount of each user's water use.

Volume 2, the Comprehensive Indices, contains nine different indices which can be used to seek information about a water use or readily locate a watershed file report of interest by: the land owner name, the type of use, the location of the use or the diversion, the apparent date of first use, the applicable adjudication filings, water rights decrees, or the water source for a water use.

Volumes 3 through 6, Watershed File Reports, contain the detailed investigation results of individual water uses and claims.

Volume 7, Zone 2 Well Reports, lists those wells that have the potential to diminish the water supply available to federal reservations.

Volume 8, Catalogued Wells, lists those wells that DWR has determined may not be subject to state surface water jurisdiction or may not be subject to claims made under federal law.

Volume 9 contains the maps of the water uses described in Volumes 3 through 6, and Volume 7.

1.1 DESCRIPTION OF VOLUME 5

Volume 5 contains six sections:

1. A map showing the subwatershed pertaining to this volume.
2. An explanation of the Watershed File Reports and the Domestic Report Table.
3. A combined index relating land owner name to watershed file report number for the Redington subwatershed.
4. A combined index relating watershed file report number to land owner name for the Redington subwatershed.
5. The Domestic Report Table for the Redington subwatershed (Table 1).
6. Watershed File Reports for the Redington subwatershed (Table 2).

Figure 1 is a map showing the subwatersheds of the San Pedro River watershed and the Redington subwatershed in particular which is the subject of Volume 5.

The Explanation of Reports section is a discussion of the report format and the significance of the data presented for both the Domestic Report Table and the Watershed File Reports. Example watershed file reports are shown and each data field of these reports is discussed in detail.

The indices are a listing of all watershed file reports for the Redington subwatershed. The first index is arranged alphabetically by land owner and by lessee/allottee. The second index is arranged numerically by watershed file report number. A page number and table are referenced for each watershed file report for both indices. The table number identifies the watershed file report as a Domestic Report or as a Watershed File Report. These are described as follows:

Table 1 - Domestic Report Table

Table 2 - Redington subwatershed Watershed File Report Table.

Table 1 shows the watershed file reports which contain domestic potential water rights (PWRs) located outside of municipal water service areas for which there are no applicable adjudication or previous water rights filings and which are supplied by a surface water source or which are located within Groundwater: Zone 1.

Table 2 lists the following: watershed file reports that have filings which claim domestic uses and which are supplied by a surface water source or

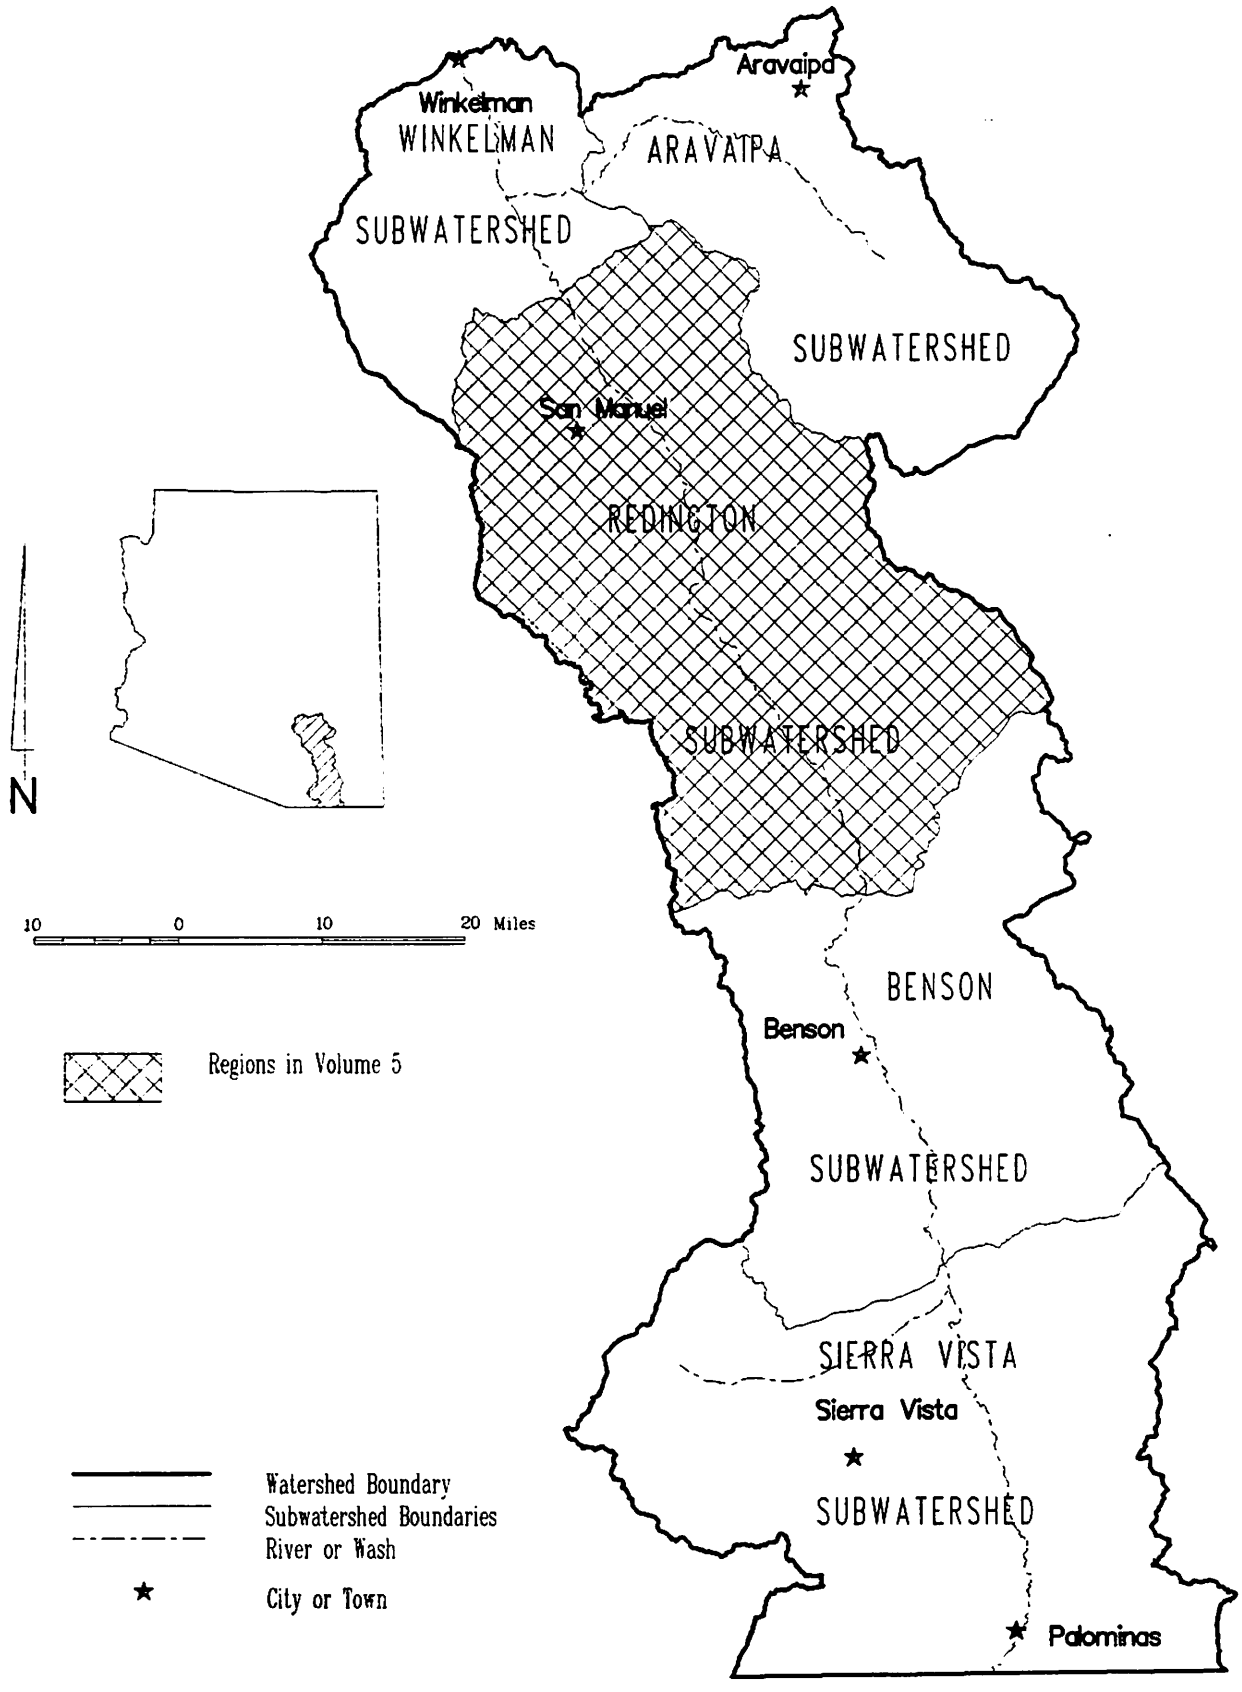

Figure 1. Map of the San Pedro River watershed showing the Redington subwatershed.

by a well located within Groundwater: Zone 1; all non-domestic PWRs; claims or PWRs involved in a shared use or diversion; claims or PWRs listed in a decree; filings or claims for which no uses were found by DWR; and all additional water rights claims. The majority of these reports are represented by a region or subregion map found in Volume 9. The watershed file report number is identical to the map number.

1.2 EXPLANATION OF REPORTS

The investigation reports display the results of DWR's identification of all water uses within a watershed. Additionally, all water rights claims and factual information such as land ownership, water source, location of diversions and uses which are pertinent to the water uses identified are also reported. The data may be used by the court and master in the determination of the extent and priority of a water right.

Data is presented in tables and in some cases on maps. Volumes 3, 4, 5, and 6 contain the tables for all watershed file reports including those reports which have accompanying maps. The maps are contained in Volume 9. Two types of reports are presented in table form. The first is a domestic use report which contains only potential water rights for domestic uses for which there are no applicable filings or decrees and which are not located within a municipal water provider service area. The domestic use report is an abbreviated version of the watershed file report which is the second report type. The watershed file reports contain all water uses including claimed domestic uses and claims for uses for which no use was found by DWR's investigations. Data including land ownership, water rights claims, location of diversions, location of uses, location of reservoirs, apparent dates of first beneficial water use, and estimated quantities of use are presented in the watershed file report.

The table format of the reports requires the use of abbreviations. Table 1 lists these abbreviations in the same order as they would occur in the watershed file reports.

For purposes of explanation, a series of examples have been prepared. They are presented in the same format as the watershed file reports they represent, and typify the reports found in this volume. Four examples are presented: (1) a Domestic Use Report, (2) a Watershed File Report which includes irrigation uses, (3) a Watershed File Report which includes stockwatering uses, and (4) a Watershed File Report containing only a claimed domestic use.

DOMESTIC USE REPORT

The Example Domestic Use Report contains data that is representative of the information shown for all of the subwatersheds within the San Pedro River watershed. The following is an explanation of each column of the table for the report.

EXAMPLE DOMESTIC USE REPORT

A. - LAND OWNER - The owner of record according to county assessor records at the time of the investigation for privately owned land, or according to the appropriate management agency for public land. The owners are listed in alphabetical order by surname; line 1 of the example shows the owner is JOHN C. ADAMS. The ownership referenced is restricted to one line, so there may be additional owners listed in that watershed file report. Public land agencies may have multiple watershed file reports listed. All reports within that group are shown under the same ownership, but are organized in numerical order by watershed file report number. Public land reports containing lessee or allottee information are shown twice, once in the name of the agency and

once in the name of the lessee/allottee. An asterisk (*) appears prior to names which are lessee/allottees.

B. - WATERSHED FILE REPORT NUMBER - The watershed file report number is a unique number assigned to water uses and/or water rights claims which occur in a specific geographic area held under one owner or one lessee/allottee. Watershed file report number assignment is the same for domestic reports and watershed file reports. The watershed file report explanation details this subject.

LOCATION OF WATER USES - This lists the county assessor's book-map-parcel description and the legal description for a domestic use in each report. Only one domestic use can be shown, so additional uses or locations may exist in a watershed file report. Each component of the LOCATION OF WATER USES description is explained as follows:

C. - CO - This is a two-digit code designating the name of the county in which the domestic use is located. For the San Pedro River watershed, they are as follows:

02 - Cochise	11 - Pinal
05 - Graham	12 - Santa Cruz
10 - Pima	

All reports will contain a county code.

D. - BK - The number of the county assessor's book of maps for the parcel in which the domestic use is located.

E. - MAP - The number of the county assessor's map for the parcel in which the domestic use is located.

F. - PRCL - The number of the county assessor's parcel in which the domestic use is located.

The combination of county-book-map-parcel is a unique description of an area of land.

G. - SUBDIV - The division of a section of land in which the domestic use is located.

H. - SC - The section of land in which the domestic use is located.

I. - TWNP - The township of the Gila and Salt River Base and Meridian in which the domestic use is located.

J. - RNGE - The range of the Gila and Salt River Base and Meridian in which the domestic use is located.

The combination subdivision (¼ ¼ ¼)-section-township-range describes an area of land approximately ten acres in size.

For line 1 of the example, NENENE 24 200S 200E, is read as the northeast one-quarter of the northeast one-quarter of the northeast one-quarter of Section 24, Township 20 South, Range 20 East of the Gila and Salt Rivers Baseline and Meridian. The last zero in the township and range numbers is used for one-half townships and ranges, and a decimal place is implied.

WATERSHED FILE REPORT

The following three examples of watershed file reports are not compiled from existing data, but contain data similar in nature to existing watershed file reports. One example shows a watershed file report containing irrigation uses, one example contains stockwatering uses, and one example contains a claimed domestic use. There is a maximum of ten main sections to the watershed file report and this is represented by the irrigation watershed file report example. When no data exists in a section, that section heading is not shown. This case is reflected by the stockwatering watershed file report example.

The watershed file report format is identical for the three examples and the following explanation covers all the examples. Columns (labeled alphabetically) under each main section heading are explained separately.

DIVERSIONS

W1 - WELL SUPPLIES DOMESTIC USES AND INCIDENTAL IRRIGATION.

USES AND RESERVOIRS

DM1 - DOMESTIC WATER USE INCLUDES IRRIGATION TOTALING LESS THAN TWO ACRES.

DM2 - DOMESTIC USE.

1. Ownership Information

A. - LAND OWNER - The owner of record according to the county assessor records at the time of the investigation for privately owned land or according to the appropriate management agency for public land.

Example Irrigation File - J.E. SMITH owns land which contains a potential water right or a water use.

Example Stockwater File - The U.S. FOREST SERVICE manages the public land which contains a potential water right or a water use.

B. - WATERSHED FILE REPORT NUMBER - The watershed file report number is a unique number assigned to a specific geographic area held under one owner or one lessee/allottee which may contain water uses and/or water rights claims. The watershed file number is comprised of three or four fields each separated by a dash (-). The combination of all the fields represents a unique location for the water use or claimed right, and shows the scale of a map which may show the water uses (see the explanation of mapping system in Volume 9 which contains the water use maps). For the Example Irrigation File, the watershed file report number is 111-23-ADD-006 and the fields are:

Field 1a	Field 1b	Field 2	Field 3	Field 4
11	1	23	ADD	006

Field 1a - These two digits represent a watershed area. In this case "11" represents the San Pedro River watershed.

Field 1b - This one-digit field represents a subwatershed area. In this case, "1" represents the Sierra Vista subwatershed. The possibilities for this field are as follows:

1 - Sierra Vista subwatershed
2 - Benson subwatershed
3 - Redington subwatershed
4 - Winkelman subwatershed
5 - Aravaipa subwatershed

Field 2 - This is a two-digit field which shows a particular "region" of land. The San Pedro River watershed has been divided into regions that are 16 miles by 16 miles (256 square miles) in size. A regional map shows 16 sections by 16 sections of land at a scale of one inch equals one mile (1" = 1 mile). For the Example Irrigation File, the region designation is 23.

Field 3 - This field is a subregional designator which is utilized when a more detailed map at a larger scale than that of a regional map is required. The detailed nature of irrigation and/or domestic uses or claims requires more detailed maps. A region is subdivided into smaller squares, and the letters in this field indicate the size of the resultant square, as well as the scale of the accompanying map. If two letters appear, then the map which the watershed file report references would be four miles by four miles square and the scale would be 1" = 1,320 feet. If three letters appear, then the map referenced would be two miles by two miles square and the scale would be 1" = 660 feet. If four letters appear, then the map referenced would be one mile by one mile square and the scale would be 1" = 330 feet. These scales are standard, but may be altered for odd sections. Field 3 is the first field in which watershed file report numbers within the same region, of any given watershed, may vary. The following are the possibilities:

(1) 111-23-AA-7 (1" = 1,320 feet)
(2) 111-23-AAA-7 (1" = 660 feet)
(3) 111-23-AAAA-7 (1" = 330 feet)

The Example Irrigation File shows the number 111-23-ADD-006 which indicates that the water uses/claims fall within the "ADD" subregion of region 23 of the Sierra Vista subwatershed of the San Pedro River watershed. All land areas under one ownership within this subregion with water uses or claims, whether contiguous or noncontiguous, will fall under the same watershed file number. Land areas with claims or uses that are contiguous and which cross subregional boundaries will be assigned a watershed file number according to the subregion in which the largest amount of land area exists.

The Example Stockwater File shows the watershed file report number 111-23-030 which indicates that the water uses/claims fall within region 23 of the Sierra Vista subwatershed of the San Pedro River watershed. Irrigation uses would not be shown within this report because all irrigation watershed file report numbers have subregional designations. Any mapped uses will be mapped at a scale of one inch equals one mile (1" = 1 mile). Land areas under one owner, whether contiguous or noncontiguous, which have no entry in the subregional field (Field 3) will be contained in the same watershed file report number. Watershed file report numbers which have no entry in the subregional field (Field 3) will contain only land areas within the region shown, except for municipal watershed file reports and large mining uses. For

the Example Stockwater File, all claims and uses shown in file 111-23-030 fall within the boundaries of region 23.

Field 4 - This field contains a sequential number assigned to each watershed file report by DWR.

The following two categories are only shown if they apply to a watershed file report.

C. - LESSEE/ALLOTTEE - The lessee or allottee of record at the time of the investigation according to the agency which manages the public land involved.

Example Irrigation File - private land/no lessee, J.E. SMITH owner.

Example Stockwater File - lessee is J.E. SMITH.

Private land owned by an individual and public land leased by the same individual will always be shown in two different watershed file reports, as in the above examples.

D. - LEASE-PERMIT ID - the number or name of the lease or allotment at the time of the investigation according to the agency which manages the public land involved. This information is only printed if it applies to the file.

In the Example Stockwater File, the lease identification number is 33033.

2. Applicable Filings and Decrees

A. - FILING NUMBER - This information is taken directly from the applicable water rights filing. A number has been assigned to each filing for water right under state law, or a number has been assigned to a court decree involving a water right, or a statement of claimant filing. A two-digit prefix delineates the type of filing which are described as follows:

10 - A notice of appropriation filed prior to the enactment of the State Water Code in 1919.

20 - a court decree involving a water right.

33, 4A, or 3R - a filing based upon Arizona Public Water Law (A.R.S. § 45-141 to § 45-173). See Example Irrigation File - 33-0000509.

36 - a filing based upon the Water Rights Registration Act (A.R.S. § 45-181 to § 45-190). See Example Irrigation File - 33-1000000.

38 - a filing made under the Stockpond Registration Act (A.R.S. § 45-271 to § 45-276). See Example Irrigation File - 38-0000900.

39 - statement of claimant filing made under the General Adjudication Statutes (A.R.S. § 45-251 to § 45-260). See Example Irrigation File - 39-0000100.

0 - Water rights filings made prior to the 1919 State Water Code which included notice of posting or notice of intent to appropriate public water.

C - Water rights filings which claimed rights established prior to the 1919 State Water Code but did not contain proof of filing.

B. - FILING STATUS - The status of certification for all filings. The possibilities are: "APPLICA." meaning an application has been made to appropriate public water; "PERMIT" meaning a permit has been granted; "CERTIF." meaning a certificate has been issued; "PROTEST" meaning the application has been protested. For a "39" the possibilities include: "AMENDED" meaning the statement of claimant has been amended or "QUE.RECD" meaning DWR has received a uniform questionnaire for the statement of claimant.

C. - USES - The type of water use(s) being claimed. In the Example Irrigation File, filing 39-0000100 has claims for IRRIGATION, DOMESTIC, and MINING water uses.

D. - QUANTITY IN AFA - This is the amount of water claimed in each applicable filing in acre-feet per annum (AFA). If the amount claimed was in gallons or cubic feet per second, DWR has converted these quantities into acre-feet per annum. If no unit of quantity was indicated, no amount will be shown in this column.

E. - USE LOCATION - This is the legal description of the location of the water use(s) claimed or shown on each applicable filing. The legal description is denoted by section (SECTION), township (TWNP), and range (RNGE). These terms are described as follows:

SECTION - A two- to eight-character field which describes all or part of a section of land in which a water use is located. All water use types except

IR, RC, or OT (irrigation use types) will be described as accurately as possible, with a potential maximum of eight characters.

For all irrigation uses (IR, RC, or OT), the description shown relates to the number of acres irrigated for that use. If the irrigated acres are less than forty acres, then all ¼ ¼ section descriptions are shown. If the irrigated acres are between forty and 160 acres, all ¼ section descriptions are shown. If the irrigated acres are greater than 160 acres, all sections are shown.

TWNP - The township(s) in which the water use is located. All townships will be shown if any portion of the water use lies within multiple townships.

RNGE - The range(s) in which the water use is located. All ranges will be shown if any portion of the water use(s) lies within multiple ranges.

F. - CLAIM DATE - The claimed date of beneficial use for each type of water use is indicated in this column. The "<" symbol indicates the claim was made "prior to" the given year.

G. - DIVERSION LOCATION - The legal location of the claimed point(s) of diversion is shown in this column as described on each applicable filing. The legal description is denoted by section (SECTION), township (TWNP), and range (RNGE). The location is shown as detailed as possible, with a ¼ ¼ ¼ section-township-range being the most detailed.

3. DWR Analysis of Filings and Decrees

A. - FILING NUMBER - This is the number of the applicable statement of claimant filings, previous water rights filings, or decrees. They are described by the following prefixes: 10, 20, 3R, 33, 36, 38, 39, 4A, "0," or "C."

B. - USES CLAIMED OR REFERENCED - The type(s) of water uses claimed on the filing is/are indicated in this column.

C. - USES FOUND BY DWR - The claimed water uses found by DWR in its investigations of the filing are listed. If the claimed use is found, it will be reported as such. Other types of findings by DWR are:

"CATALOGUED" - The claimed water source is a Zone 3 well or an exempted well located in Zone 2 (see the DIVERSIONS explanation).

"DISCONTINUED" - No water use has occurred on this property in the last five years, but there has been a water use within the past ten years based upon historical aerial photography and DWR's field investigations.

"INCIDENTAL" - Use is incidental to another water use.

"NONAPPROPRIABLE" - Water use is utilizing nonappropriable water according to A.R.S. § 45-151.

"NONE" - No use could be found.

"NOT APPLICABLE" - The claimed water use or diversion does not apply to this watershed file report.

"SPRING" - The claimed water source is a spring that serves primarily stockwatering uses.

"STOCKWELL" - The claimed water source is a well that serves only stockwatering uses.

D. - APPLIES TO DIVERSIONS - The points of diversion which apply to this filing as determined by DWR's investigation are listed. See the section entitled DIVERSIONS.

E. - APPLIES TO PWR NUMBERS - The potential water rights (PWRs) which apply to this filing are listed. These PWRs are found under the USES section or RESERVOIRS section.

4. Diversions

A. - DIV. # - The type of diversion supplying water to the PWR. The letter designates the type of diversion and a number is assigned after the letter when there are multiple diversions of the same type. The following possibilities exist:

D - Diversion dam
P - Instream pump
S - Spring
W - Well

B., C., & D. - SECTION, TWNP, RNGE - This shows the legal description for the location of the diversion number listed. The location is shown as detailed as possible, with a ¼ ¼ ¼ section-township-range being the most detailed.

E. - DIVERSION NAME - The name of the diversion if any as shown on a statement of claimant, a previous water right filing, or a United States Geological Survey (USGS) quandrangle map.

F. - WATER SOURCE AND CLASSIFICATION - The Court has directed DWR to report all water uses supplied by surface water sources which include surface streamflow, springs, or seeps. The Court in its order dated September 9, 1988 pertaining to groundwater and surface water interrelationships directed DWR to provide additional information on underground water that is withdrawn by wells. Section 4.6, Chapter 3 of Volume 1 of the HSR describes in detail DWR's technical interpretation of the Court's directives and the methodology used to implement them. DWR has established three reporting zones for water withdrawn from wells. "Zone 1" delineates the area in which water withdrawn from wells is considered, for the purposes of the HSR, to be pumping appropriable subflow according to the criteria provided by the Court's order. The criteria of the Court's order are as follows.

1. As to wells located in or close to that younger alluvium, the volume of stream depletion would reach 50 percent or more of the total volume pumped during one growing season for agricultural wells or during a typical cycle of pumpage for industrial, municipal, mining, or other uses, assuming all instances and for all types of use that the period of withdrawal is equivalent to 90 days of continuous pumping for purposes of technical calculation.

2. A well is designated on state records as an in lieu well. This statement means that a well is pumping groundwater to replace a surface water source.

3. A well is designated by state certification as pumping surface flow.

The limits of this area has been designated by DWR as the "brightlines" in the HSR and underground water withdrawn by wells located in this zone is classified as "GROUNDWATER: ZONE 1."

"Zone 2" describes an area in which wells (supplying uses other than stockwatering, domestic, or irrigation of less than two acres) have the potential to diminish the sources of supply (surface and/or groundwater) available to satisfy federal reserved water right claims. The Court's order states the following:

> In determining a prioritization of such claimed federal reserved right, it will be necessary to determine all stream users or

diversions of either surface water or groundwater which affect those sources reasonably on, at, or near the federal parcel which would be available to fulfill the determined entitlement.

Earlier in the order, it is also stated that:

> Because each subwatershed is to an extent different and the downstream location of federal and Indian reserved surface rights is different as compared to where upstream goundwater pumpers are located, it may be necessary to hold factual and evidentiary hearings to establish the parameters of what constitutes a significant diminishment of water rights within such time frame as would affect the United States ability to carry out the primary purpose of the reservation or federally reserved lands. (Emphasis added)

A well located in Zone 2 will be classified and reported as "GROUNDWATER: ZONE 2."

"Zone 3" is an area in which underground water withdrawn from wells has been determined to have no significant effect on diminishing the water supply available to satisfy water rights claimed or established under either state or federal water law. Wells located in Zone 3 and the exempted wells in Zone 2 are classified and reported as "GROUNDWATER: CATALOGUED."

In summary, DWR is reporting the following sources of water and their classification:

SURFACE WATER
GROUNDWATER: ZONE 1
GROUNDWATER: ZONE 2
GROUNDWATER: CATALOGUED

and various combinations of the above sources.

In the Example Irrigation File, diversion "D01's" water source and classification is shown as:

SURFACE WATER: SAN PEDRO RIVER

Diversion "W01's" water source and classification is shown as:

GROUNDWATER: ZONE 1 OF THE SAN PEDRO RIVER

Two other remarks are also shown in this section and these are:

UNUSED - The diversion was not capable of being used at the time of the investigation.

SHARED - The diversion is shared and shown in at least two watershed files. A "SHARED" use entry should refer the reader to the SHARED USES AND DIVERSIONS or EXPLANATION sections for further information.

5. Uses

A. - PWR # - These are the potential water right numbers given to water uses found during the investigation. The following are the types of water uses listed:

DM - Domestic	MU - Municipal or Water Company
DV - Diversion	OT - Other Irrigation
ID - Industrial	RC - Recreational Irrigation
IR - Agricultural Irrigation	SW - Stockwatering
MI - Mining	WL - Wildlife Watering

The water use designation is the last part of the potential water right (PWR), which consists of the watershed file report number and the water use number.

Example Irrigation File: 111-23-ADD-006-DM001
111-23-ADD-006-DV001
111-23-ADD-006-IR001
111 23-ADD-006-IR002
111-23-ADD-006-IR003

For example, in watershed file report number 111-23-ADD-006, there are five water use PWRs: one domestic use (DM001), one diversion (DV001), and three agricultural irrigation uses (IR001, IR002, and IR003).

Example Stockwatering File: 111-23-030-DM001
111-23-030-SW001
111-23-030-SW002

For watershed file report number 111-23-030, there are three water use PWRs: one domestic use (DM001) and two stockwatering uses (SW001 and SW002).

B. - LOCATION - This shows the legal description for the location of the PWR. A ¼ ¼ ¼ section-township-range is the most detailed description possible.

C. - SUPPLIED BY DIVERSIONS - The type and number of diversions supplying the PWR. In the Example Irrigation File, "IR002" is supplied by diversions "S01" and "W02."

D. - WATER SOURCES - The type of water serving the PWR. The possibilities are:

- SURFACE WATER - the water source is surface flow, a spring, or a seep;
- GROUNDWATER: ZONE 1 - the water source is a well located within Zone 1 or the "brightlines;"
- GROUNDWATER: ZONE 2 - the water source is a well located in Zone 2;
- GROUNDWATER: CATALOGUED - the water source is a well located in Zone 3 or an exempted well located in Zone 2;

or combinations of the above sources. (Refer to the DIVERSIONS section explanation for a detailed description of the water sources and their classifications.)

E. - PHOTO DATE - The date of the earliest historic aerial photograph which shows a water use. All irrigation uses are investigated utilizing historical photography.

In the Example Irrigation File, IR001 - 1935 shows that water use number IR001 existed on a 1935 photograph and on all available photography between 1935 and the date of investigation.

The photo date implies a continual use history from the date shown to the time of the investigation based on available historic aerial photography.

F. - SOURCE CHANGE - If the investigations identified this acreage as being served by a surface water source at some point in time but it is no longer served by surface water then "YES" appears in this column. A "YES" will also appear in this column if the source has changed from groundwater to surface water.

G. - FACILITY NAME - The name, if any, associated with the PWR to aid in identifying the PWR.

6. Reservoirs

A. - PWR # - The number of the reservoir PWR type. Three reservoir types are listed:

PS - Primary storage reservoir
SP - Stockpond
SR - Small reservoir

The reservoir designation is the last part of the potential water right (PWR), which consists of the watershed file report number and the water use number.

Example Irrigation File: 111-23-ADD-006-SP001
111-23-ADD-006-SR001

For example, watershed file number 111-23-ADD-006, there are two reservoir PWRs: one stockpond (SP001) and one small reservoir (SR001). The water uses and reservoirs comprise a complete inventory of PWRs for all contiguous land owned by J.E. Smith in the San Pedro River watershed, and/or all noncontiguously owned land within region 23, subregion ADD. If J.E. Smith owns land in another area of the San Pedro River watershed, or a different subregion which is not contiguous to the land in the Example Irrigation File, then another watershed file number may exist.

Example Stockwatering File: 111-23-030-SP001

For watershed file report number 111-23-030, there is one reservoir PWR which is a stockpond (SP001). The water uses and reservoirs comprise a complete inventory of PWRs for all land in region 23 of the San Pedro River watershed. J.E. Smith might own additional land with PWRs in any other region of the San Pedro River watershed.

B. - LOCATION - This shows the legal description for the location of the reservoir PWR given as the center of the dam. A ¼ ¼ ¼ section-township-range is the most detailed description possible.

C. - SUPPLIED BY DIVERSIONS - The type of diversion supplying water to the reservoir PWR.

D. - WATER SOURCES - The type of water being supplied to the reservoir PWR. The possibilities are: SURFACE WATER, GROUNDWATER: ZONE 1, GROUNDWATER: ZONE 2, GROUNDWATER: CATALOGUED, or a combination of water sources.

E. - PHOTO DATE - The earliest historical photography from which existence of the reservoir could be verified.

F. - RESERVOIR NAME - The name of the reservoir, if any, listed on the statement of claimant, previous filing, or USGS quadrangle map.

G. - STORAGE PURPOSE - The purpose(s) of the reservoir storage is/are listed. The following are the possibilities:

COOLING	INDUSTRIAL	RECHARGE
DOMESTIC	IRRIGATION	RECREATION
EFFLUENT	MINING	STOCKWATERING
EROSION CONTROL	MUNICIPAL	TAILINGS
FIRE PROTECTION	OTHER	WASTEWATER
FISH REARING	POWER	WILDLIFE
FLOOD CONTROL	PRIMARY STORAGE	

7. Shared Uses and Diversions

This section describes any shared water uses or diversions that occur. In the Example Irrigation File, water provided by the MANY FARMS IRRIGATION DISTRICT is delivered to many users.

8. PWR Summary

A. - PWR # - These are the PWR numbers assigned by DWR to water uses. These are found in the USES and RESERVOIRS sections.

B. - APPLICABLE ADJ (ADJUDICATION) FILINGS - This section shows the statement(s) of claimant which DWR has investigated. A match can be made by claimed diversions or by claimed places of use.

The Example Irrigation File shows 39-0000100 matched to DM001. This match was created because a domestic use was claimed and a domestic use was located. The 39-0000103 filing is not matched to a PWR number. A stockwatering use was claimed on filing 39-0000103, but the claimed stockwatering was not found during the investigation. A claim can be matched to more than one water use number, such as filing 39-0000100 being matched to DM001 and IR001.

C. - APPLICABLE PRE (PREVIOUS) FILINGS - This section shows the previous water right filing(s) or decree(s) which DWR has investigated. A match can be made using claimed diversions or claimed uses. For the Example Irrigation File, filing 36-2000000 claims an irrigation use which has been verified during the investigation as IR001. A claim can be matched to more than one water use number, i.e. filing 36-2000000 is matched to DM001, IR001, IR002, IR003, IR090, and SR001.

D. - (APPARENT FIRST USE) DATE - The apparent first date of beneficial use determined by DWR. The date is taken from matching previous water rights

filings or decree(s) or from the statement(s) of claimant. The date listed on the documents is used unless DWR has documentation or evidence which refutes the date. When multiple claims or filings match the same PWR, the earliest possible date is used as the apparent date of first use.

In the Example Irrigation File, IR003 - 33-0012345, 1950 is assigned to IR003 because 33-0012345 showed that date. The photo date, 1950, showed that the use existed in 1950, but no evidence existed to show that the use occurred before 1950.

For IR001, the date claimed on 36-2000000 (1930) could not be refuted by the 1935 photo. Therefore, a 1930 date of first use was given to IR001.

E. - BASIS FOR THE (APPARENT FIRST USE) DATE - The source used by DWR to determine the apparent date of first use. These sources may be aerial photography, adjudication or previous filings, claimant interviews, prior decrees, or other sources of information verified by DWR.

F. - WATER SOURCES AND CLASSIFICATIONS - The source(s) and classifications of the water which supplies each PWR. The following are the water sources and classifications which may be shown:

9. Quantities of Use

A. - PWR # - The potential water right number given to water uses found during the investigation.

B. - QUANTIFICATION TYPE - This section describes the type of quantity being determined or estimated. For irrigation PWRs, there are five possibilities:

DECREE - The "DECREE" quantity of use is based on the amount specified in a water right decree applicable to the irrigation use in the watershed file.

CERTIFICATE - The "CERTIFICATE" quantity of use is based on the amount specified in applicable certificate of water right granted under the State Water Code.

MAX. (MAXIMUM) OBSERVED - The "MAX. OBSERVED" quantity of use is applied to each irrigation water use equal to or greater than two acres and represents DWR's estimate of actual water use observed during DWR's field investigations. The "MAX. OBSERVED" quantity is based on data specific to each irrigation PWR such as: the type(s) of crop(s) grown, the maximum amount of acreage irrigated in any one year during DWR's investigation period, water application methods, and field conditions.

REGIONAL - The "REGIONAL" quantity of use is based on typical farm conditions found in a watershed or in a particular region of a watershed, and the total acres that received irrigation during DWR's five year investigation period. The typical condition was determined from an analysis of the kinds of crops grown, water application and farm management practices, sources of water supply, soil conditions, climate, and topography.

MAX. (MAXIMUM) POTENTIAL - The "MAX. POTENTIAL" quantity of water is applied to each irrigation water use equal to or greater than two acres and represents DWR's estimate of maximum potential water use for an irrigation PWR. The maximum potential quantity is based on a high water using crop grown in the region, the total acres irrigated during DWR's five year investigation period, and the irrigation efficiency designated for the irrigation operation.

For impoundments (PS, SP, and SR), the maximum area and capacity (MAX. AREA/CAP.) data are provided.

C. - **ACRES** - This section displays the acreage associated with an irrigation PWR or the surface area associated with a reservoir PWR.

D. - **CROP TYPE** - For irrigation PWRs, the type of crop grown is shown in this section. The type of crop reported is based on DWR's crop surveys and field investigations. The following table lists the crop types that can be displayed in this section.

E. - EFF - The water use efficiency of the irrigation operation based on DWR's field investigations., crop surveys, or water usage determinations. The efficiency is only reported for the maximum observed and maximum potential quantification types. The efficiency value is shown as a percentage. In the Example Irrigation File, PWR "IR001" has an estimated efficiency of 35% for both the maximum observed and maximum potential quantities.

F. - WATER DUTY - This section lists the water duty for an irrigation PWR. The water duty is given for each quantification type previously listed. The normal unit of measurement is acre-feet per acre (AF/AC) but for decreed or certificated quantities it can be in cubic feet per second (CFS) or in acres per cubic feet per second (AC/CFS).

G. - ESTIMATED VOLUME - For irrigation PWRs, the estimated volume is applicable acreage times the water duty and is given in acre-feet per annum (AFA). For reservoirs or impoundments, it is the maximum capacity and is given in acre-feet (AF). For other water uses, a estimated volume may or may not be provided, depending on the availability of data. Any special circumstances will be described in the explanation section and the term SEE EXPLANATION will be displayed. The units that are displayed for other uses will be in acre-feet per year or annum (AFA).

H. - REMARKS - This section will list any remarks pertaining to a PWR. The following are the possibilities:

- SEE EXPLANATION - The EXPLANATION section will provide additional information about the PWR.
- SEE VOLUME 1 - GENERAL ASSESSMENT - Volume 1 contains additional information about the PWR.
- DEFICIT IRRIGATION - This remark indicates that DWR has determined that insufficient water has been applied to the crop to meet the consumptive use requirements of the crop. This determination is based on DWR's field observations or water use calculations.
- DISCONTINUED IRRG. - DWR has determined that no irrigation has taken place on this property (or parcel) in the last five years, but there has been irrigation within the past ten years based upon a review of historical aerial photography and field investigations.

I. - DIVERSION PWR NOS. - This section applies only to diversions which have been given a diversion PWR. These "DV" PWRs are assigned primarily to irrigation districts, large surface water diversions, or diversions which export water out of a watershed.

J. - DIVERSION CAPACITY - The diversion capacity is the maximum theoretical capacity of the diversion system as determined from DWR measurements or obtained from other sources. The capacity is given in CFS.

K. - MAXIMUM DEMAND RATE - The maximum demand rate is the amount of water flow needed to meet the peak irrigation requirement of crops supplied by the diversion during the growing season. The rate is also expressed in CFS.

L. - DECREED RATE - If a diversion has a rate specified in a water right decree, the decreed rate is shown in CFS.

M. - CERTIFICATED RATE - If a diversion has a rate specified in a water right certificate, the certificated rate is shown in CFS.

O. - ESTIMATED VOLUME DIVERTED - The estimated volume diverted is DWR's estimate of the annual amount of water that is diverted. It is reported in AFA.

10. Explanation

The findings made by DWR are explained for each major section of the watershed file report. In the Example Irrigation File, the following sections are explained:

- FILINGS AND DECREES
- DIVERSIONS
- USES AND RESERVOIRS

Not all sections will require an explanation. The explanations are intended to make the watershed file report and DWR's findings more understandable.
