Official Regulatory List for the Santa Cruz Active Management Area Fourth Management Plan

The Santa Cruz Active Management Area (SCAMA) Low-Water-Use/Drought-Tolerant Plant List was prepared by the Arizona Department of Water Resources (ADWR) in cooperation with experts from various municipal, nursery and landscape specialists.

A Resource for Regulated Water Users

The use of low-water-use/drought-tolerant plants is required in public rights-of-way and in other instances as described in the SCAMA Fourth Management Plan¹ (4MP). The Low-Water-Use/Drought-Tolerant Plant List was developed to inform regulated water users when selecting landscaping plants that meet these requirements. Following are the sections in the SCAMA 4MP in which the list is referenced:

- Section 5-601(4) and (42) Definitions, Low Water Use/Drought Tolerant Plant List for the SCAMA and Water-intensive Landscaped Area
- Section 5-609(A)(2), Individual User Requirements for Municipal Providers and Individual Users, requirements for public rights-of way
- Section 6.3.1, All Industrial Users Conservation Program Description
- Section 6.3.2, Additional Conservation Requirements for Turf-Related Facilities
- Section 6-601(6), Definitions, Low Water Use/Drought Tolerant Plant List for the SCAMA
- Section 6-602(4) and (5), Conservation Requirements
- Section 6-603(A)(6), Monitoring and Reporting Requirements
- Section 6-701(10) and (19), Definitions, Low water use landscaped area and Turf acres
- Section 6-702(C)(2), Conservation Requirements for Turf-Related Facilities
- Section 6-704(B)(2)(a), Allotment Additions, Revegetation Addition for Turf-Related Facilities
- Section 6-901(5)(a), Definitions, Water-intensive Landscaped Area
- Section 6-903(3), Monitoring and Reporting Requirements

A Resource for Communities, Residents and Businesses

The Low-Water-Use/Drought-Tolerant Plant List is also a resource for communities, residents and businesses that are interested in conserving water through low-water-use landscaping. Plants on the SCAMA list can be grown in the Santa Cruz area with very low to moderate supplemental irrigation once they are established. Supplemental irrigation should be of sufficient quantity to saturate the plant's root zone. All plants in the SCAMA list can grow with less water than traditional high-water-use landscape plants.

¹ The 1980 Groundwater Code requires the preparation of a series of water management plans for each AMA that includes mandatory conservation programs. The SCAMA 4MP will be Adopted in 2020.

Request to Waive the Requirement or Modify the List

Pursuant to the SCAMA 4MP sections 5-609(A)(2) and 6-602(5), the ADWR Director may waive the requirement to use plants on the Low-Water-Use/Drought-Tolerant Plant List if the water user demonstrates to the satisfaction of the Director that the plants on the list cannot grow in a publicly owned right-of-way because of high elevation or low light conditions, such as a freeway underpass. Those who wish to request a **waiver** of the list should submit their request in writing or by email to the ADWR Director including the following information:

1. Description of the location of the publicly owned right-of-way
2. Map showing the location of the right-of-way and the place where plants will be located
3. Botanical and common name of the plant under consideration
4. Description of plant's water needs, including references

Additionally, anyone wishing to add, delete or **modify** information on the list is encouraged to submit their request to the ADWR Director in writing or email.

Waiver and **modification** requests can be sent to:

Definitions and Key to Symbols

Watering Depth

All the plants on the Low-Water-Use/Drought-Tolerant Plant List use low water amounts. Plants should be watered to their root depth:

- Mature trees should be watered to a depth of 24" to 36"
- Mature shrubs should be watered to a depth of 18" to 24"
- Mature groundcovers, vines, and succulents should be watered to a depth of 8" to 12"

Additional Watering Depth Considerations:

- Most plants require regular irrigation during the first 2 to 3-year establishment period.
- Winter growers will require less frequent irrigation due to cooler temperatures.
- 0.62 gallons of water is equivalent to one inch of precipitation on one square foot of soil.
- Average annual rainfall in Nogales is approximately 19"; in low rainfall years, the plants on the list may need additional irrigation to maintain good appearance and plant health.

Water Use (H₂O Use)

Water-use Categories (for established plants during the growing season):

1 = Very low: trees/shrubs/succulents - water every 3-4 weeks
vines/groundcover - water every 2-3 weeks

2 = Low: trees/shrubs/succulents - water every 2-3 weeks
vines/groundcover - water every 1-2 weeks

3 = Moderate: trees/shrubs/succulents - water every 1-2 weeks
vines/groundcover - water once a week

Plant Type: Based on growth form and general shape of the plants. The plant type categories in this list are: annual, cactus, grass, groundcover, perennial flower, shrub, succulent, tree, and vine. Some plants may belong to multiple plant type categories.

Origin: The location(s) that the plant originated in and is native or endemic to.

Height (Ht) & Width (Wt): Average size of a mature plant in normal landscape conditions. Height and width are in feet, unless noted differently.

Bloom Season: Time of year when the plant blooms.

Flower Color: Dominant blossom colors.

Cold Tolerance (Cold Tol): The lowest temperature in degrees Fahrenheit that the plant is known to tolerate before suffering serious injury or death. Hardiness can vary with a plant's age, health, location and how long the temperature remains below freezing.
