I voted no for an AMA because there was no long term plan that was visible.

I agree that there needs to be control on wanton water usage. As a private water user I try to conserve and manage my water usage but there are water users that are intending to use as much water as possible to increase their wealth and move on and those who only think about their own enjoyment ( i.e. golf courses and private swimming pools.)

This plan should address the careless use of water and explore ways to recharge the aquifer aggressively.

I am hopeful that the AMA will be beneficial to all stake holders- now and in the future.
